Enhancing residency education through suscemes assessment

Advancing Education in Medical Professionalism

OVERVIEW

PURPOSE: To provide educational resources for program directors and

other medical educators to aid teaching and assessing

professionalism, one of the six ACGME general competencies

Content:	Description of professionalism	Page 2
	Frequently asked questions about professionalism	3
	Approaches to teaching professionalism	5
	Approaches to assessing professionalism	8
	Example assessment instruments	9
	Web-based resource guide	19

ACKNOWLEDGEMENTS

We are grateful to the following educators who reviewed and provided feedback on this resource: Nancy Bennet, EdD (University of Illinois College of Medicine at Urbana-Champaign), Bradley Benson, MD (University of Minnesota), James Clardy, MD (University of Arkansas for Medical Sciences), Diane Hartmann, MD (University of Rochester Medical Center), Gregory Larkin, MD (University of Texas Southwestern Medical Center), Rita Patel, MD (University of Pittsburgh Medical Center), and Joel Rosenfeld, MD (St. Luke's Hospital).

General Disclaimer

"Advancing education in medical professionalism: An educational resource from the ACGME Outcome Project" includes descriptions of approaches that can be used to teach and assess residents. It does not include all the approaches that can or may be used by a residency program for teaching and assessing residents, or by a program director in verifying that a resident has demonstrated sufficient professional ability to practice competently and independently. The ACGME shall not be liable in any way for results obtained in applying these approaches. The user, and not the ACGME, shall be solely responsible for the results obtained in applying the approaches described herein. Further, the user agrees and acknowledges that, in using this resource, he/she/it is solely responsible for complying with all applicable laws, regulations, and ordinances relating to privacy.

What is Professionalism?

PROFESSIONALISM

Residents must demonstrate a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population. Residents are expected to:

- demonstrate respect, compassion, and integrity; a responsiveness to the needs of
 patients and society that supercedes self-interest; accountability to patients, society, and
 the profession; and a commitment to excellence and on-going professional
 development.
- demonstrate a commitment to ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, informed consent, and business practices
- demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities (ACGME, 1999)

Other Perspectives on Professionalism

Medical professionalism is the ability to meet the relationship-centered expectations required to practice medic ine competently (Kuczewski et al., 2003; Lynch et al., in press; Surdyk et al., 2003).

Examples

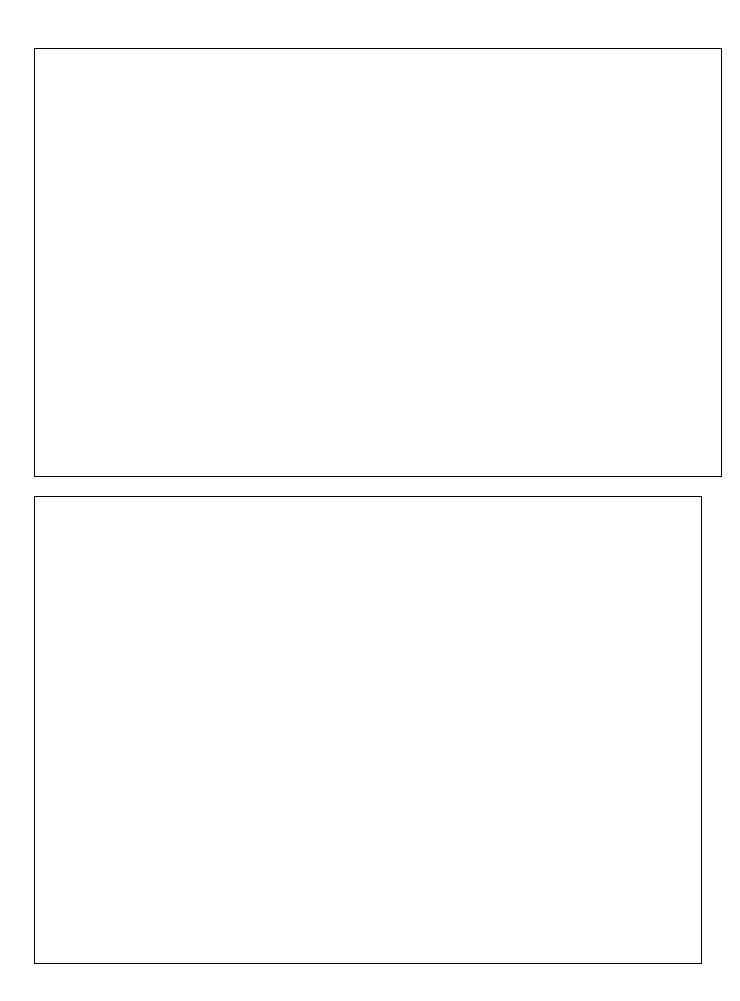

- *patient-physician relationship: being careful and thorough when performing physical examination
- *community-physician relationship: participating in initiatives to improve health care safety
- *health care system-physician relationship: interacting respectfully with other health care providers
- *physician-physician relationship: taking time to teach medical students and residents
- *self-physician relationship: reflecting critically on own performance

Professionalism is based on the principles of primacy of patient welfare, patient autonomy, and social justice. It involves the following professional responsibilities: competence, honesty, patient confidentiality, appropriate relations with patients, improving quality of care, improving access to care, just distribution of finite resources, commitment to scientific knowledge, maintaining trust by managing conflicts of interest, commitment to professional responsibilities (ABIMF, ACP-ASIM, & EFIM, 2002).

There is a broad scope of approaches to **Teaching Professionalism** in Graduate Medical Education

The Wake Forest Physician Trust Scale

What is it?

The Wake Forest Physician Trust Scale is a 10-item rating form that measures physician professionalism and patient care skills. Patients rate each item on a 5-point scale ranging from strongly disagree (1) to strongly agree (5) and can complete the form at any time since it does not pertain to a specific encounter.

How may it be used?

Information obtained from the Wake Forest Physician Trust Scale may be used to provide residents formative feedback about professionalism and selected patient care skills. The Wake 0.0049

ABIM Scale to Measure Professional Attitudes and Behaviors in Medical Education

The following survey is designed to elicit the experiences residents in internal medicine have during their training that affect their professionalism. Therefore, your participation is greatly appreciated. Please complete the survey and return it to your program director expeditiously. Thank you.

^{*}professionalism items are in bold type

Barry Challenges to Professionalism Questionnaire

Please read the following cases. Recognizing that there may be other approaches, select the single best answer from those listed.

1. A pharmaceutical company approaches you about a clinical research project involving your office patients. Your patients with high blood pressure will be eligible to be treated with a new medication that has just been released by the FDA. The object of the study is to evaluate risks and benefits of this medication in an unselected office population. The pharmaceutical company will pay \$250 per patient for the expenses generated by the study, and one year's salary for a data manager and will supply the drug free of charge. Meetings to discuss the initiation of the study and follow-up results will be held in New Orleans and Honolulu. Your spouse will be invited as the company's guest to attend these meetings since they will take you away from home.

Participating in the study would be considered appropriate professional behavior if:

- A. Your patients signed an informed consent.
- B. Your patients sign an informed consent and your partners approve the study.
- C. An oversight committee of the hospital where you have privileges or your regional medical society approves the study.
- D. None of the above.
- 2. You are practicing hematology and oncology in a suburb of a large metropolitan area. Currently, you refer your patients who require radiotherapy to one or two hospitals in the city depending on where the patients live and the type of problem. A radiotherapist whose knowledge and skill you respect informs you that she will be joining a for-profit national radiotherapy company that is thinking of locating in your area. This new company will bring both the latest equipment and up-graded service to your community. She informs you that an excellent opportunity now exists to invest in this company and that the larger the number of investors from the area, the greater the likelihood the company will locate the unit in your community.

Which of the following statements most accurately assesses the possibility of conflict of interest regarding your investment in this company?

- A. An investment will pose a conflict of interest and you should not make it.
- B. Your investment will pose no conflict of interest because the new radiotherapy unit will offer superior treatment and will be available to your patients.

C.

- B. Return the call and tell the patient's mother you can't discuss the matter, knowing this will look suspicious to her.
- C. Return the call but be evasive when guestioned about the nature of the visit.
- D. Don't return the call.
- 4. You are the chief of service at a hospital and a medical student informs you that she smelled alcohol on the breath of an attending physician during morning rounds on more than one occasion. This report is confirmed by another student and a resident. How do you proceed?
 - A. Approach the physician in question and ask if he/she has a drinking problem.
 - B. Talk to friend and family members of the physician to see if they suspect a drinking problem.
 - C. Review the physician's file and monitor him/her closely.
 - D. Report the physician to the Colorado State Board of Medical Examiners.
- 5. During your rounds with the housestaff team, a male staff member comes up to the group, places his arm around the waist of a female house officer, and thanks her for the terrific job she did she did taking care of one of his patients. You sense that the house officer is made uncomfortable by the gesture. An appropriate first response would be which of the following?
 - A. Do nothing, on the basis that the faculty member was simply showing his appreciation for a job well done.
 - B. Report the incident to the program director as an example of sexual harassment.
 - C. Tell your colleague, the faculty member, that you thought the gesture was inappropriate and that you were made uncomfortable by it.
 - D. Ask the resident if the gesture made her uncomfortable.
 - E. Ask the resident if there are actions she would like you take on her behalf.
- 6. An established patient of yours presents with symptoms of depression. This is the second time in three months that the patient has visited you for these complaints. You wish to start treatment with anti-depressant medication. As you are filling out the prescription, the patient asks you not to document the diagnosis or medication in the chart. She is concerned that her employer will find out about her diagnosis and she could potentially lose her job like a coworker did. She knows that her insurance company has access to her diagnosis. How do you proceed?
 - A. Inform the patient that you must document the diagnosis to provide any treatment.
 - B. Agree to not document the diagnosis but prescribe the medication anyway.
 - C. Agree to not document the diagnosis but refuse to provide the prescription.
 - D. Terminate your relationship with the patient because she is inhibiting your ability to provide adequate care.
 - E. Document an alternative diagnosis, such as fatigue, and provide the prescription.
